

LeCoach

Practice alone. Feel an audience.

Your Private AI Audience.

A local rehearsal experience for workplace presenters.

ATTENTION

REACTION

NEXT ACTION

The problem: practicing alone offers no responsive audience.

Proposal draft • 10 October 2026 • Local CPU implementation; first live checks reported

Before the meeting, rehearse in private.

Initial user hypothesis: workplace speakers who need a repeatable way to practice delivery.

01 / TEAM UPDATE

**Make the message
easy to follow.**

Team leads rehearsing an update before colleagues hear it.

02 / PROPOSAL

**Explain a complex
idea clearly.**

People presenting a plan, product decision or project result.

03 / IMPORTANT MOMENT

**Practice without
scheduling a crowd.**

Speakers preparing for a pitch, interview or internal review.

User needs and value are hypotheses; no user study or measured benefit is claimed.

One session. A useful next rehearsal.

Speak, notice the audience response, then revisit a few moments with evidence.

1

Prepare

Choose rehearsal.
Check input status.

2

Deliver

Speech + head/body
facing signals.

3

Feel

One rule engine.
Gradual reactions.

4

Review

A few moments.
Concrete next steps.

Live CPU input and generated coaching are implemented. Default replay retains authored example coaching.

Live audience response.

Turn delivery signals into an intuitive reaction the speaker can notice.

OBSERVE

Delivery signals

Pace, fillers and pauses.
Approximate facing and
movement observations.

COMBINE

One engagement engine

Rules with smoothing.
Stale and missing signals
remain explicit.

RESPOND

A reactive audience

Gradual loss of attention
and recovery as delivery
changes.

Rules and smoothing are tested; the maintainer reports working live input. Facing is approximate, not eye tracking.

Weak delivery → recovery

The 50-second weak_to_improved fixture drives the sole deterministic engagement engine.

00:00

NEUTRAL

00:20

CONFUSED

00:30

BORED

00:35

INTERESTED

00:40

ENGAGED

00:10 / EXAMPLE IMPROVEMENT

Pause after a key point.
Rehearse the passage at a slower pace.

00:40 / EXAMPLE STRENGTH

Keep a steady pace while
facing toward the audience.

One shared clock. One audience engine.

Normalized events connect independent adapters to audience reactions and session feedback.

Python + FastAPI / React + TypeScript / loopback transport / injected subsystem seams

Implemented: local speech/vision, engine, UI, recorder and generated coaching. Final acceptance is separate.

Handle missing signals honestly.

A shared capture-time timeline makes audience changes and later feedback explainable.

TIMELINE

Capture time is preserved.

Late observations retain their original timestamps.
Sessions keep separate IDs.

FAILURES

Unknown stays unknown.

Unavailable inputs carry explicit status and nulls.
Startup and drain are bounded.

LOCAL-DATA DESIGN

Keep rehearsal processing local.

Local CPU inference implemented.
Raw recording off by default.
Independent privacy audit pending.

Lifecycle tests and maintainer-reported live checks. Timing and privacy audit remain unmeasured.

ASUS UGen300 USB-8G

Intended Hailo-10H acceleration behind the same speech and vision adapter seams.

Hailo-10H

Chipset

8 GB

LPDDR4

USB 3.1 Gen2

Type-C interface

SPEECH / CANDIDATE

Whisper Tiny / Base / Small

Windowing and delivery delay need testing.

VISION / CANDIDATE

Hailo-10H pose HEFs

USB + concurrent compatibility unverified.

Vendor specifications and model candidates only. No UGen300 detected or measured on this development host.

Reproducible checks. First live run.

Automated results and maintainer-reported live checks have different evidence scopes.

267

tests passed

392

subtests passed

9 / 10

fixture cases / sessions

Checked: contracts, engine rules, recorder, coaching, revised events and failures; repeat sessions; live checks reported.

Pending: measured speech accuracy, final coaching/UX review and video, UGen300 performance.

Observed 10 October 2026 / Ubuntu x86_64 / Python 3.12.14 / application source 66d1c8e

Make rehearsal a repeatable loop.

Audience response is intended to make delivery changes easier to notice and practice.

FEEL THE CHANGE

Intuitive reactions

Use audience behavior to make delivery changes noticeable during practice.

REVISIT A MOMENT

Concrete next actions

Return to a timestamp and practice a specific delivery adjustment.

EVALUATE THE VALUE

A workplace pilot

Compare practice approaches; review clarity of feedback and willingness to rehearse again.

Expected value and evaluation plan. No measured user outcomes, ROI or accuracy claim.

Prove the live loop. Then measure the target.

Implementation and a first live check are delivered; owner acceptance and final demo review remain separate.

DELIVERED / FIRST LIVE CHECK

Local CPU rehearsal

Speech, vision, engine and coach;
maintainer-reported live checks.
English proposal draft.

NEXT / FINAL REVIEW

Accepted demo

Owner handoffs and measurements.
Review final script and recording.
Prepare online submission.

STAGE II / HARDWARE

Measured UGen300

Resolve USB/runtime setup.
Measure concurrent operation.
Publish scoped, honest evidence.

Stage I can use host-based validation. Target-platform validation is required in Stage II; final submission gates remain pending.

Review the evidence. Run the prototype.

Source links and limitations accompany the proposal, with reproducible setup in the repository.
